Be prepared for the unexpected

EY Cyber Threat Resiliency Service powered by Tanium

Securing your company's IT architecture is critical to value creation and business resiliency. To achieve the data-driven operations and security posture required to stay competitive and compliant, companies must have eyes and hands across the entire network.

Complex network infrastructure, siloed data, tool and device sprawl:
- heighten risk
- create inefficiencies
- impede opportunity and innovation

The EY and Tanium Alliance provides real-time visibility, comprehensive control, and rapid response to our shared customers. We help you assess cybersecurity risks across your organization and strengthen your defenses.

Protect your assets. Fortify your network. Defend your endpoints.
Challenges today's leaders face

93% of CIOs report that IT's ability to maximize value for the business is hindered by data silos[1]

40% of CIOs say silos make it difficult to identify the severity of an issue and minimize business impact[2]

55% of organizations use more than 20 tools across IT Operations and Security[3]

65% of businesses only consider cybersecurity after it's already too late[4]

Is your company prepared for the unexpected?

Full visibility of your IT estate

To protect your company, you need to know the entirety of your IT footprint and where your most important assets reside.
Tanium's platform:
- provides end-to-end network visibility
- unifies management under one platform and one agent
- oversees all of the heterogeneous environments that comprise your on-premises and cloud network

EY's trusted advisors rely on Tanium's Endpoint Management and Security Platform to produce endpoint data with accuracy and speed so clients can act with confidence.

Gain strength by knowing your weaknesses

EY's Cyber Resiliency Service provides prioritized data- and metric-driven recommendations to reduce these specific risks with rapid time to value for your business. Tanium's Endpoint Management and Security Platform combined with EY experts and best practices:
- provides a real-time risk view
- comprehends misconfigurations and unpatched systems
- detects unmanaged assets, unauthorized devices, shadow IT, and other IT risks

Determine your company's vulnerabilities and level of exposure before addressing them as part of comprehensive digital strategy.

Free up your staff to be proactive

IT leaders can benefit from EY's expertise in the strategy, implementation, and operation of Tanium's Endpoint Management and Security Platform to arm customers with real-time data to:
- streamline IT operations
- accomplish more with less
- make smarter investment decisions
- reduce costs throughout the IT environment
- identify and engage potential cybersecurity threats

Building sound business and security strategies takes data, knowledge, and the expertise to apply it. Knowing is half the battle. Acting is the other half.
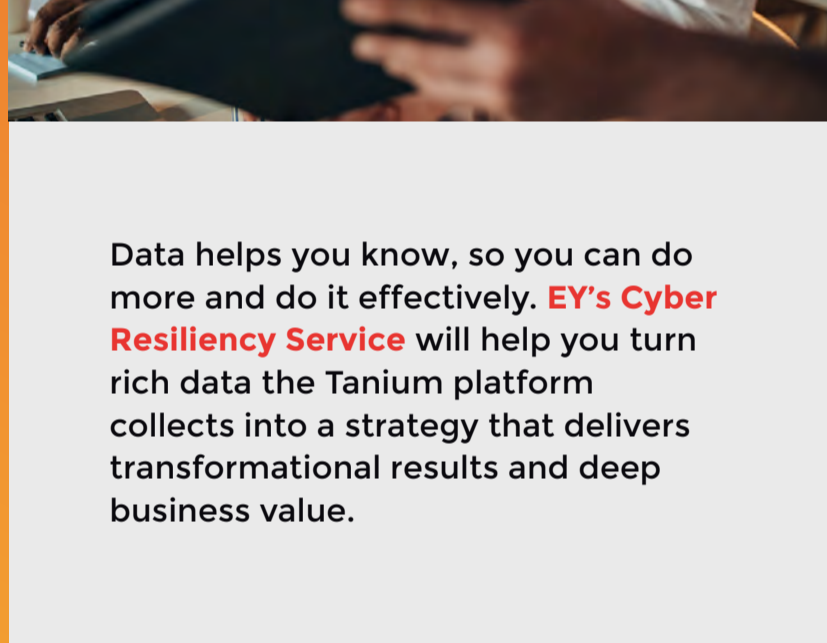

Data helps you know, so you can do more and do it effectively. EY's Cyber Resiliency Service will help you turn rich data the Tanium platform collects into a strategy that delivers transformational results and deep business value.

Be strategic in your defenses and actions

Retrofitting cybersecurity tools around existing systems leaves you with management and reporting headaches instead of a unified security posture. Increased regulations require companies to support more regulatory and reporting requirements. Consolidating to fewer best-of-breed solutions:
- simplifies reporting
- increases productivity
- lessens resourcing requirements

EY's Cyber Resiliency service has proven Tanium enable programs to take customer teams from reactive to proactive.

EY & Tanium: Partners in building threat resiliency

EY's Cyber Threat Resiliency Service is a modular engagement coupling EY's industry-leading expertise with Tanium's platform. It's a proven outcome-based offering that focuses on identifying systemic business and technical risks within an organization. We target our clients' specific priorities, such as responding to a security incident or proactively reducing attack surface risk through endpoint hygiene best practices.

EY's Cyber Resiliency Service is ideal for:
- IT operations and tool rationalization
- security, risk, compliance assessments and programs
- diligence (security, mergers & acquisitions, divestitures)
- asset discovery
- cloud and digital transformation strategizing

Tanium offers endpoint management and security that is built for the world's most demanding IT environments. Many of the world's largest and most sophisticated organizations – including over half of the Fortune 100, top retailers and financial institutions, and multiple branches of the U.S. Armed Forces – rely on Tanium to make confident decisions, operate efficiently and effectively, and remain resilient against disruption.
