Our Purpose

Deep Instinct takes a prevention-first approach to stopping ransomware and other malware using the world's first and only purpose-built, deep learning cybersecurity framework. We predict and prevent known, unknown, and zero-day threats in <20 milliseconds, 750X faster than the fastest ransomware can encrypt.

Deep Instinct has >99% zero-day accuracy and promises a <0.1% false positive rate. The Deep Instinct Prevention Platform is an essential addition to every security stack—providing complete, multi-layered protection against threats across hybrid environments.

Why Deep Instinct?

Embrace Prevention.

Stop malware and other threats – including unknown and zero-day – before they execute. In <20ms Deep Instinct prevents malicious threats from entering your environment. What others promise, we deliver.

Faster is Better.

True prevention – and protection – is a race against time. We detect and prevent threats before they execute, 750X faster than the fastest known ransomware is able to encrypt.

More Precision.

We couple the industry's highest detection rate (99%+) with the lowest number of false positives (<0.1%), optimizing SOC teams and delivering the peace of mind that the most serious threats are prevented every time.

Uniquely Engineered.

Our purpose-built deep learning framework was designed to prevent threats faster and more accurately than any EPP or EDR tool in the world.

Augment Seamlessly.

The Deep Instinct Prevention Platform augments the security tools you already own, like EDR, to improve their effectiveness, drastically reduce false positives, and limit the burden on your SOC team – allowing you to get more from your existing security investments.
