

# SIRIUS AND TANIUM

Sirius partners with Tanium to bring our clients unified endpoint security and management solutions. Our national team of experts has deep security expertise across the enterprise to help clients leverage Tanium solutions for improved agility and efficiency in managing the endpoints of a digital enterprise.

## EVERYTHING ENDPOINT, ALL IN ONE PLATFORM

Endpoint security is an advancing security vector. As digital transformation and remote access grow, so does the number of devices. Layering solutions into the security stack no longer works. The volume and complexity of cyberthreats and privacy regulations have moved beyond legacy solutions.

Tanium gives organizations the unique power to secure, control and manage millions of endpoints across the enterprise within seconds. Many organizations discover 10 to 20% more endpoints that legacy tools failed to identify. With the unprecedented speed, scale and simplicity of Tanium, security and IT operations teams now have complete and accurate information on the state of endpoints at all times so they can more effectively protect against modern-day threats and realize new levels of cost-efficiency in IT operations.

## AN INTEGRATED APPROACH TO CYBERSECURITY

Sirius draws on decades of experience from across the IT spectrum to help you focus on what's valuable, move protection closer to the point of risk, and adapt your security practices to meet current threats. We provide world-class technology solutions, expert implementation and advisory services, top-ranked

managed services, and proven methodologies backed by customized testing in our state-of-the-art Technology Enablement Center. We help to advance your security program and optimize your overall IT risk management strategy so you can protect your data, your intellectual property, and your brand.

## THE TANIUM PLATFORM

It's now a work-from-anywhere world, and the Tanium Platform gives organizations the capabilities to see, control and respond to events on endpoints anywhere using a single platform. See critical endpoint data in real time that is both comprehensive and accurate. Make informed decisions and act with lightning speed to minimize disruptions to your business.

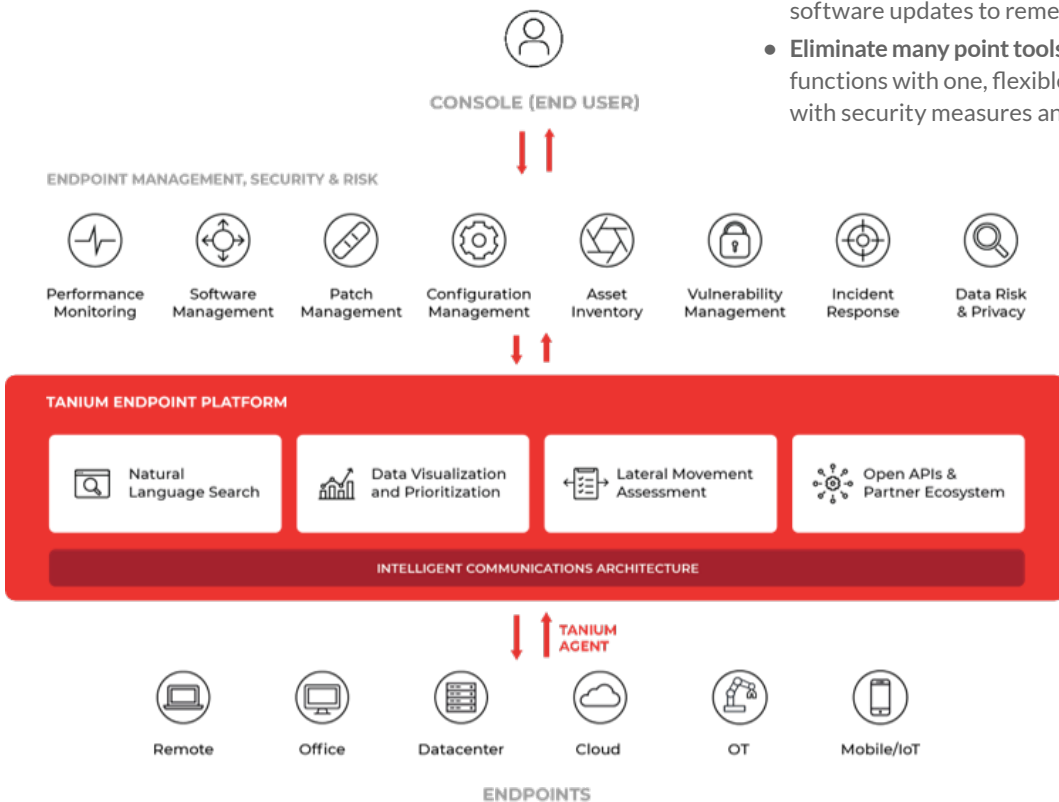

Tanium's Endpoint Management solution provides support for a breadth of operating systems, servers or cloud IaaS with unmatched speed and scale across your entire environment. Tanium's Endpoint Security and Risk portfolio prioritizes solving the underlying conditions that contribute to organizational risk, beginning with a solid foundation based on full endpoint visibility and control.

### TANIUM ENDPOINT MANAGEMENT

- **More effective patch management:** First-pass patch success rates often increase from 60% using legacy tools to 99+%.
- **Regain license costs:** Better visibility into asset inventory and usage could mean saving hundreds of thousands of dollars.
- **Reduce overall infrastructure:** Remove the requirement for hundreds or more servers from legacy tools.

### TANIUM ENDPOINT SECURITY

- **Ask any question:** Move quicker and more comprehensively to scope an issue or incident through natural language queries so you understand what's going on with your endpoints in real time.
- **Reduce the attack surface:** Improve first-pass, zero-day patching efficacy from 60% to 99+%.
- **Improve recovery time:** Speed recovery time from weeks or months to hours by deploying recovery actions, patches or other software updates to remediate at scale.
- **Eliminate many point tools:** Consolidate multiple endpoint security functions with one, flexible agent designed to continually keep up with security measures and threats.
