

MANAGE RISK AND MITIGATE THE
IMPACT **BEFORE, DURING AND AFTER** A
CYBER ATTACK

Risk management **and** **cybersecurity**

Digital Transformation security

Remote Access #workfromhome

Objective: To safely enable work from anywhere, at any time, to any resource, in a consistent experience with full and secure access to business applications and services.

Protection for Applications and Digital Services

Objective: Enable the process of optimization and digital transformation providing security to the applications and services exposed to the clients of said services.

Protection of infrastructure and Cloud Services

Objective: To protect services and applications that have been migrated or born in the cloud.

Security Operations

Visibility of threats and malicious activities in the organization

Objective: Detect threats or attacks in progress that negatively impact the organization.

Management of Information Security solutions

Objective: Operate IT Security technology platforms and solutions.

Vulnerability and threat management

Objective: Identify potential weak points in the infrastructure and computing resources of the organization.

Resource Protection

Efficient Protection Management for computers and servers

Objective: Protect the organization's assets against cyber attacks that affect computer systems.

Perimeter security

Objective: Safeguard the limits of the organization with external entities, third parties and the internet.

Human Firewall

Objective: Educate and measure the user's propensity for social engineering attacks.

Consulting

Security incidents Response

Objective: Guarantee a prompt and adequate response to an incident.

Cybersecurity Consulting

Objective: Strengthen the organization's security strategy through architectures, use cases, diagnostics and consultative support.

Consulting for business innovation

Objective: Information Security and Business Continuity Consulting to ensure innovation and opportunity in their businesses.
